KAIFENG YAN

Full-Stack Development / AI Agent Applications / AI Product Internships

yankf@163.com | github.com/icn1Vad | icn1vad.github.io

Computer science master's student at HKU with experience in enterprise AI product design, web development, and agent-system integration. Work across product workflows, interactive frontend demos, customer communication, and cross-service collaboration for document review.

EDUCATION

The University of Hong Kong | Sep 2026 - 2028 (expected)

MSc in Computer Science, full-time. AI & Decentralized Technologies stream.
University-level academic scholarship.

Lanzhou University | Sep 2021 - Jun 2025

BEng in Computer Science and Technology, Data Science track.

CORE PROJECT

ProofSpace - Enterprise Contract & Policy Review Agent | Mar 2026 - present

Co-founder, Suzhou Aituge AI Technology Co., Ltd. since Jun 2026. AI product design and full-stack development within a three-person technical team.

- Designed policy-ingestion, entity-identification, rule-selection, and risk-review flows; supported enterprise product discussions and interactive frontend demonstrations.
- Developed React / Next.js pages and task lists; integrated server-side pagination, request deduplication, session-scoped caching, background refresh, retry behavior, and unit tests.
- Contributed to Web / Java / Python service boundaries and asynchronous Task / Run / Event / Artifact workflows, connecting business state with agent execution.
- Designed document / risk-panel interactions, source highlighting, proposed-change comparisons, citation-based questions, and report export; contributed to memory and evidence-alignment approaches.

INTERNSHIPS

China Electronics Engineering Design Institute | Mar - May 2026

Software development intern, Beijing. Organized OA and design-document workflow fields, interface requirements, and engineering documents; supported prototype testing and delivery documentation.

Sinopec Shengli Oilfield, Geophysical Research Institute | Jul - Sep 2023

Data analysis intern. Contributed to AI-module integration, random-forest and SVM prediction experiments, parameter tuning, and information-system maintenance.

PERSONAL AND UNIVERSITY PROJECTS

- **GPT-Mindmap:** team contribution to a Flask-based mind-map website integrating database, ChatGPT, and XMind interfaces. Completed university innovation project.
- **Posture monitoring:** contributed to TensorFlow.js / MoveNet keypoint detection, data collection, annotation, and training. Team won third prize in the 2023 Gansu provincial e-commerce innovation competition selection.
- **GNNShap-to-Cancer (undergraduate thesis):** adapted CGMega / MCF7 graph data and model inputs; ran sampling and weighted least-squares explanation experiments; analyzed memory limits and solver failures.

TECHNICAL SKILLS

Web: TypeScript / JavaScript, React / Next.js, Vue, Python, Java, SQL, REST APIs.
AI and data: tool calling, agent context and memory, structured extraction, evidence alignment, PyTorch / PyG, PySpark.
Engineering: Git, Linux / Shell, Docker, SSH, Vitest, interface integration.
